

3.6.2025

List of desired features for Digital Identification Service for Foreigners:

- 1. Mobile Application:** Available in general app stores.
- 2. Supported Devices:** All supported iOS and Android versions. Solution must also support new versions without delay.
- 3. Integration:** Must be able to integrate with Suomi.fi e-Identification. The service is available as just another authentication mechanism.
- 4. API Requirements:** Integration with Suomi.fi e-Identification is done using the OpenID Connect (OIDC) protocol.
- 5. Coverage of countries:** All countries in the world, as comprehensively as possible.
- 6. Registration/on-boarding:** Must support online and remote registration.
- 7. Target Audience:** Foreign people without Finnish personal identity code.
- 8. Level of Assurance:** Service don't have to reach certain specific level of assurance according to eIDAS definitions for the identity method, the level of assurance could be more flexible and possibly evolve throughout the lifetime of the identification method.
- 9. Unique Identifier:** User receives a unique identifier that does not change while using service. A person can only register once. No double identities.
- 10. GDPR Compliance:** Personal data must be processed within the EU/EEA.
- 11. SLA:** No downtime, available 24/7/365, updates are generally performed without interruptions.
- 12. Accessibility:** Service must be accessible, according to Requirements of the Act on the Provision of Digital Services → <https://www.saaavutettavuusvaatimukset.fi/en/requirements-act-provision-digital-services/requirements-act-provision-digital-services>
- 13. Interoperability:** Service's unique identifier will be used in Suomi.fi e-Authorizations. The identifier must be compatible with Suomi.fi e-Authorizations. Current service users whose identifiers are linked to valid authorizations should be migrated to the new service.
